

Your presentation will never be the same!

communicator **77**
markant

The Markant Communicator is the best product! Whether intended for meetings, video conferences, presentations, interviews or training courses, the Communicator increases the effectiveness of gatherings.

The Markant Communicator is a digital, interactive whiteboard, flip chart and projection screen in one. The system works in conjunction with a PC or laptop and an LCD projector.

Ten times as many notes

All notes and drawings are digitally stored and can be printed and distributed by e-mail. The digital recording system enables ten times as much written text, compared with analogue boards. The projection quality is the best there is.

Digital function buttons

The board features 20 digital buttons (fast keys) that substantially increase user-friendliness. The same functions are on both sides of the board, for both left or right-handed users. Simply touching them with the pen activates the software functions.

77 inch size

The board is 20% larger than analogue boards and has a diagonal image dimension of 77 inch (196 cm), which provides more note space.

A real Whiteboard

The board is made of impact-resistant synthetic material. Unlike analogue boards, it is not scratch-sensitive and the screen does not have to be re-tensioned. The surface is smooth and can be written on with markers.

Plug and play

The software provided runs with Microsoft Windows. It has an open structure and can be freely used without troublesome licence registration. It is immediately ready to use after installation. Updates are offered on the Internet free of charge.
